Hibernate Composite Primary Key Generator

Jun 24, 2011 If the database table has more than one column as primary key then we call it as composite primary key, so if the table has multiple primary key columns, in order to configure these primary key columns in the hibernate mapping file we need to use one new element called composite-id. The generator is used when the primary key is a natural key instead of a surrogate key. If the table has one primary key then in hibernate mapping file we need to configure this column by using element. composite-id Example On this Files required Aug 11, 2015 If the database table has more than one column as primary key then we call it as composite primary key. If the table has multiple primary key columns, in order to configure these primary key we need to use composite-id. This is the default behavior if you do not specify a element The assigned generator makes Hibernate use unsaved-value='undefined'.
